

AI Friday Season 2 – Problem Statements

AI-Powered Personalized Travel Expense Report Generator

PROBLEM STATEMENT

Corporate travelers spend significant time compiling travel expenses into reports for reimbursement. Manual report creation is error-prone and inconsistent, often requiring back-and-forth corrections. Existing tools require manual data entry or lack natural language interaction. There is a need for a generative AI assistant that can automatically generate accurate, policy-compliant expense reports from uploaded receipts and travel data, simplifying the process and reducing administrative overhead.

Data Considerations:

Receipt images (JPEG, PNG), travel itineraries (PDF, CSV); OCR and text extraction APIs; company expense policies in text format; data preprocessing for receipt normalization; privacy compliance for financial data; synthetic receipts for testing. Consider using synthetic or anonymized data where appropriate. Ensure data quality and relevance to the problem context.

Consider using synthetic or anonymized data where appropriate. Ensure data quality and relevance to the problem context.

SOLUTION EXPECTATIONS

A web app where users upload receipts and itineraries and receive AI-generated travel expense reports with policy compliance checks; integration with OCR and expense management APIs; metrics on extraction accuracy and time saved; demo includes multi-format upload and report generation. Feel free to explore creative solutions that align with the problem context and objectives.
